# LightBytes® plus

Getting a head start in ICT

LightBytes plus is a highly interactive software solution suitable for teaching the core set of basic skills in ICT across a wide range of ages and abilities. The package consists of a CD-ROM, fully integrated with supporting materials to help make teaching ICT stress-free.

LightBytes plus is divided into 11 units covering:

- keyboard, mouse skills and word processing
- introduction to computer hardware and peripherals
- working with Windows
- creating databases, spreadsheets and using graphics programs
- using the internet and e-mail safely
- end-of-unit tests and final test on all topics covered in the course

The *LightBytes plus* program

- full sound and speech option
- user-friendly screen layout with attractive graphics
- focus on 'fun' learning throughout
- simple and easy-to-follow structure
- frequent checkpoints and tests
- teachers can monitor pupils' progress by accessing unit test results

Coursebook and worksheets

- Coursebook reinforces the work carried out at the computer and prepares the pupil for written worksheet tasks
- worksheet tasks consolidate the learning gained from the program and Coursebook
- worksheets can be used in the classroom or as homework assignments

Teachers Guide

- Teachers Guide gives comprehensive support in setting up and using the course
- offers guidance on selective use of various configuration features
- provides overview of course content, unit passwords and model answers to worksheets

The **LightBytes plus** course equips students with the all important basic ICT knowledge and skills required that will act as a springboard for further studies in the subject.
